AU-8:TIME STAMPS

Control was implemented via the **MySQL Audit Inspector Interface** provided as a plugin.
Installation via INSTALL PLUGIN.

Control [a]

- A system clock was generated that depicts the correct time, to keep accurate track of all changes that the system undergoes.

Control [b]

- An internal clock was implemented to the system to keep track of all activity going on the system.
 - The information gathered includes, but not limited to:
 - User logins
 - User attempts to login
 - User failures to login
 - Information added to the scheme
 - New Tables Generation

Overall, any changes the system experiences wherever made by the user or the server
