

## AC-7 UNSUCCESSFUL LOGON ATTEMPTS

---

### Control [a]

- A limit of “three” (3) consecutive invalid logon attempts by any user accessing the database.
- After the three attempts have been used, the connection will be aborted
  - The purpose of this control is to limit the number of attempts made to logon on to the system. This is done as a countermeasure against brute force attacks and denial of service attacks.

### Control [b]

- Accounts that were attempted to access will be locked, and users will be denied entry.
  - This added feature is for the safety of the users. \
- To retrieve, or unlock account, user must reach out to the Server Administrator.
